

MiniPack Media Auto Integrated Shrink System

Features

- Teflon coated seal blade
- Film waste winder
- Digital control panel with 6 programs
- Seal only or seal/shrink mode
- Adjustable conveyor height
- Auto cool down cycle for seal blade
- Auto bar sealer
- Auto conveyor discharge

This is a fully automatic L-bar sealer with a built-in tunnel that is perfectly suited for medium sized mass production. The Media Auto features an automatic L-bar closure and cutter wire cooling to allow for faster packaging. The compact, on board shrink tunnel is equipped with temperature, height and speed adjustments. Thanks to its motorized sealing bar and to the shrinking tunnel, Media Auto can work perfectly with all kinds of films. Electrical plug not included.

Features

- "L" sealer system with 16"x 22" seal dimensions
- Automatic and manual operation mode
- Digital control panel
- Micro knife sealing system
- Seals 10 to 12 items per minute
- Portable - moves around on casters
- Can be programmed to work with automatic cycle or foot pedal use
- Pneumatic sealer requires air (1 CFM @ 80 psi)

The Pro Pack PPG 1622 MKA L Sealer System is an efficient and portable solution for your shrink-wrapping needs. It is capable of sealing varying sizes such as produce packages, meats, small prints, magazines, CD's, DVD's and gift baskets. This pneumatic sealer allows an operator to program it to work with an automatic cycle or use a foot pedal for manual operations.

Pro Pack PPG 1622 MKA L Sealer System

MiniPack FM 76A Digit Semi-Automatic Shrink Wrap System

Features

- Emergency stop cycle switch
- Auto discharge conveyor
- Film waste winder
- Teflon coated sealing blade
- Seal only or seal/shrink modes
- Wraps up to 12 items per minute
- Adjustable chamber height
- Automatic seal bar timer
- Cooling system for seal blade
- Hands free operation

The FM 76A Digit is a semi-automatic chamber shrink wrap machine that quickly and reliably shrinks products. It also has a motor-driven transport belt inside the hood and an exit idle roll for automated shrink machine for a small business with limited personnel and space. Electrical plug not included.

NexGen-2030 One Step Shrink Wrap Machine

Features

- Timed double magnetic cover latch
- Wrap packages up to 23" x 33" x 10" high
- 4 to 8 packages per minute
- Includes a stand with heavy duty lockable rolling casters
- Anti-adhesive teflon coated sealing blade
- Consumes less energy than tunnel and bar sealer system

The NexGen-2030 One Step Shrink Wrap Machine eliminates the need for a separate "L" sealer and tunnel for manual operations, offering shrinking and sealing in one easy step. The clear chamber cover allows the operator to view the product while shrinking, allowing for quality control. The pin perforation device is included and allows for air to escape shrinking packages.

Features

- Anti-adhesive Teflon Coated Sealing Blade
- Durable transparent hood
- Heavy duty lockable rolling casters
- Advanced pin perforation device

The NexGen-1000 Shrink Wrap Machine represents the evolution of one-step shrink-wrap systems. It offers great flexibility, ease of operation and high performance. It offers a magnetic hold down so it remains closed during the shrinking cycle, allowing a hands free operation. It also has micro-knife sealing technology. The hood is released after the fan has stopped and then opens through a gas spring.

NexGen-1000 One Step Shrink Wrap Machine

MiniPack Galaxy Manual Shrink Wrap System

Features

- Air cooled sealing system
- Adjustable chamber height
- Recessed teflon coated sealing blade
- Dual magnetic locks
- Film opener
- Optional stand/cart, roll support, shelf and waste winder available

The Galaxy one step manual shrink wrap system has a newly designed shrink hood and heater that will ensure it keeps sealing packages accurately every-time. It has nine working programs which include seal only, seal with delayed shrink & seal and shrink modes. The new "product fingers" eliminate wrinkles.

Features

- Packing width 6.25"x 9.75"
- Thickness .31"x .60"x .79"
- Wraps up to 20 per minute
- Digital control panel
- Package counter

The Mail Bag Digit is the ideal machine to wrap newspapers, catalogs, bulletins and overall publication. It only uses one film roll of clear or printed polythylene, placed on motorized rollers. The film is driven in a width adjustable forming box that folds it forming an envelope/bag around the product. Closing the bag is done by using longitudinal and cross sealing arms, then the product is automatically ejected.
